

How to fix JAVA security settings

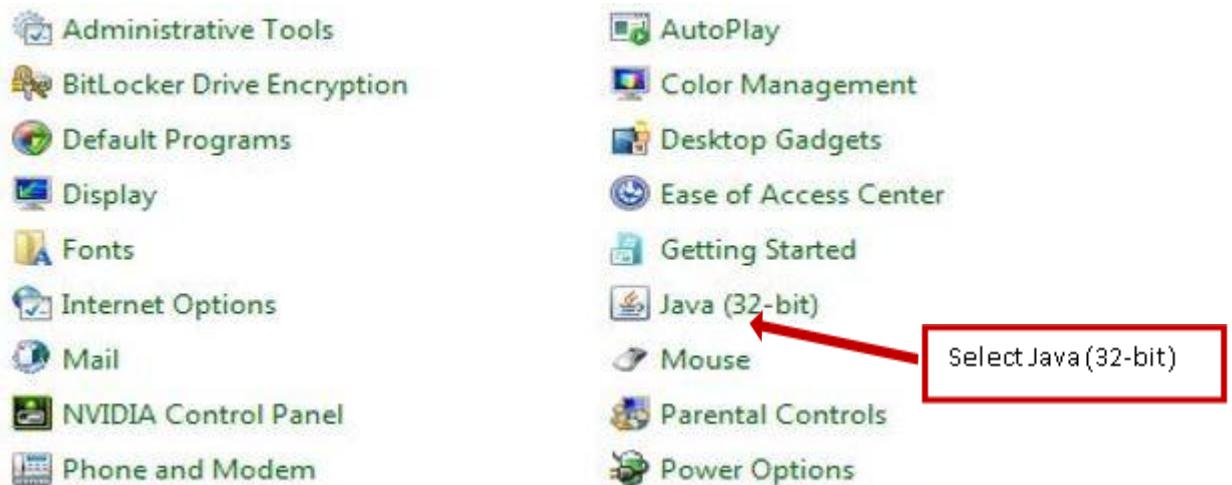

1. Go to the St. Kitts Customs website and select either **LIVE** or **TRAINING** environment.

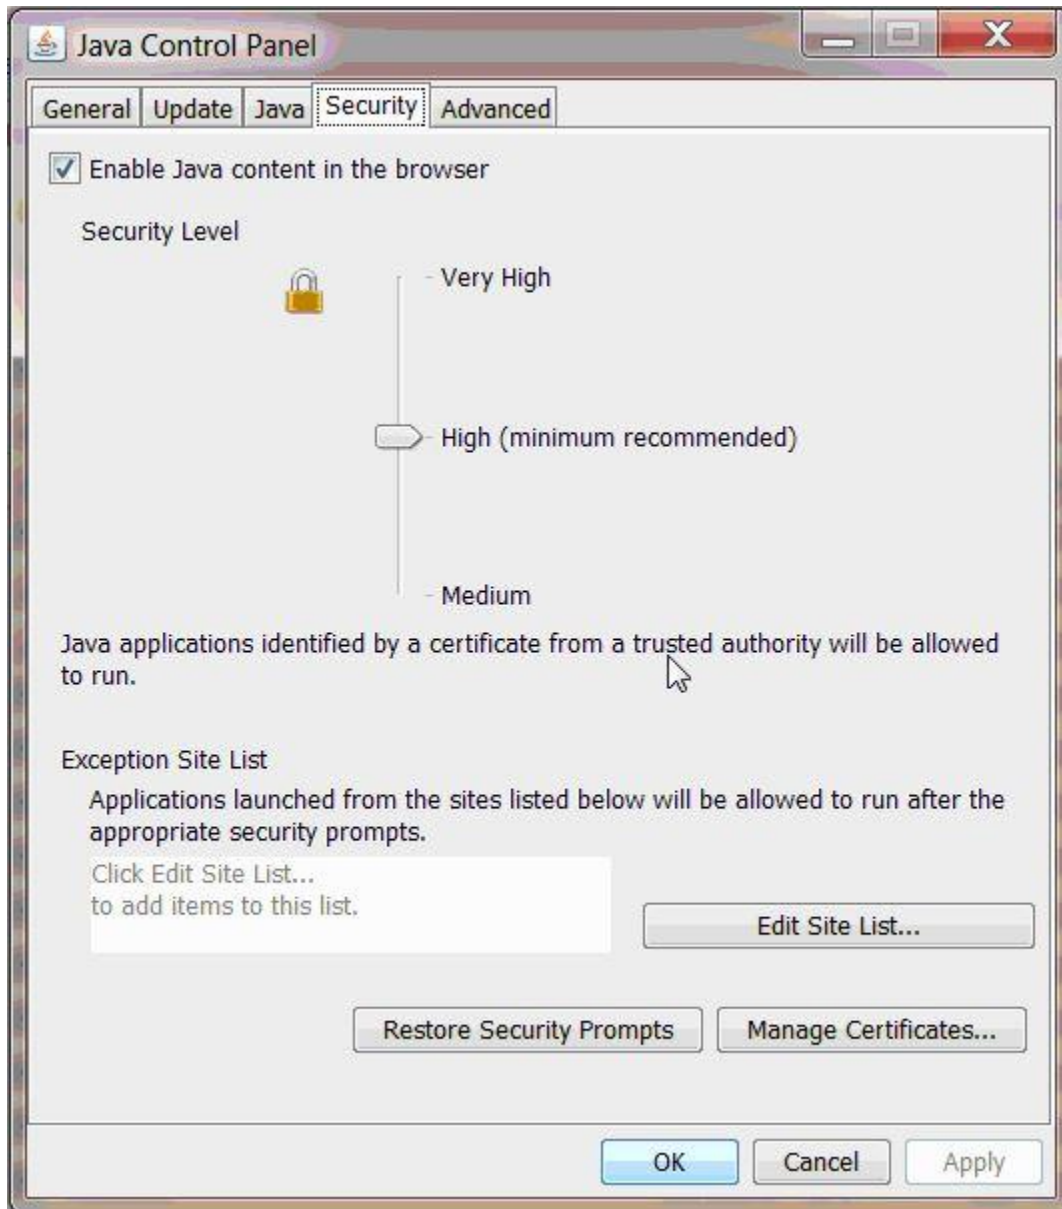

2. If the login screen does not appear then you will see the below screen instead:

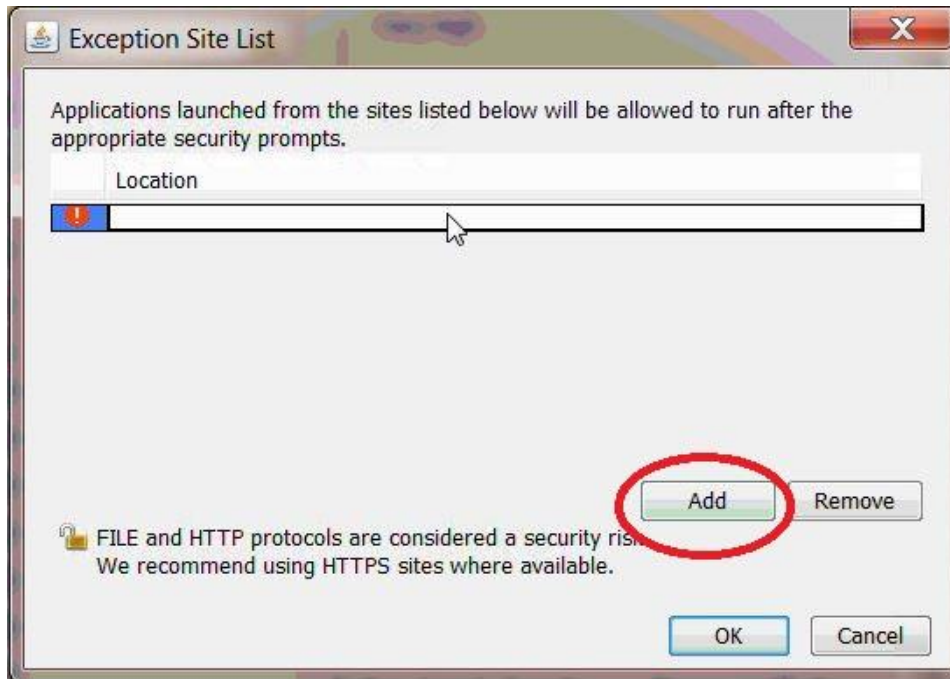

3. On your PC, go to control panel and select **Java (32-bit)**.

4. The Java control panel will open. Select the tab **Security** then select **Edit Site List** at the bottom.

5. The **Exception Site List** screen will appear. Select **ADD** to input your information.

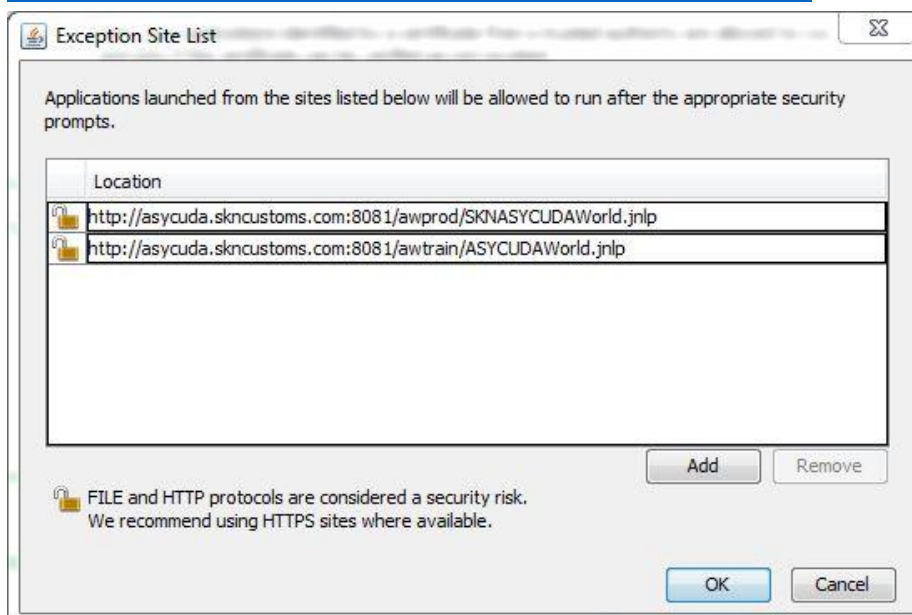

6. Input the following information in the field provided

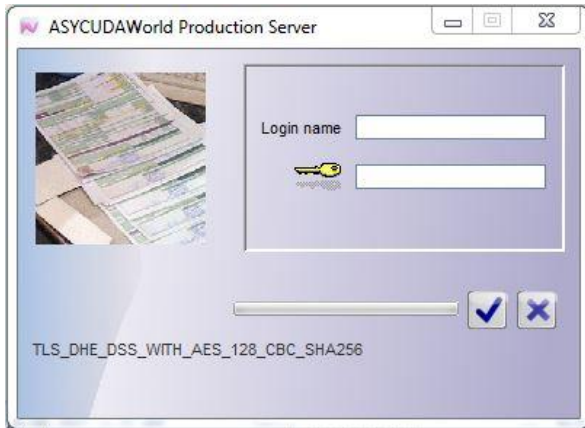

<http://asycuda.skncustoms.com:8081/awprod/SKNASYCUDAWorld.jnlp>

And then click add again and input

<http://asycuda.skncustoms.com:8081/awtrain/ASYCUDAWorld.jnlp>

7. When finish, select ok then close the Java Control Panel and try to launch ASYCUDA by accessing the Customs website - <http://skncustoms.com/Index.aspx>.

The login screen should now show as shown above.
